MARKET-BASKET-ANALYSIS

Documentation

TEAM MEMBER: R.SWETHA

REG NO : 513421106048

PHASE : 5

PROJECT : MARKET BASKET ANALYSIS

October 30, 2023

[1]: #This is a kaggle notebook.

```
import numpy as np # linear algebra
import pandas as pd # data processing, CSV file I/O (e.g. pd.read_csv)
import os
for dirname, _, filenames in os.walk("/kaggle/input"):
    for filename in filenames:
        print(os.path.join(dirname, filename))
```

/kaggle/input/market-basket-analysis/Assignment-1_Data.xlsx/kaggle/input/market-basket-analysis/Assignment-1_Data.csv

1 Market Basket Analysis Project

1.1 Overview

This notebook is part of a project focused on market basket analysis. We will begin by loading and preprocessing the dataset.

1.2 Dataset Information

The dataset is stored in the file Assignment-l_Data.xlsx located at /kaggle/input/market-basket-analysis/. It contains information related to market transactions.

1.3 Loading the Dataset

Let's start by loading the dataset into a DataFrame using pandas.

[2]: import pandas as pd

Load the dataset

dataset_path = "/kaggle/input/market-basket-analysis/Assignment-l_Data.xlsx"
df = pd.read_excel(dataset_path)

2 Initial Exploration

We'll perform an initial exploration of the dataset to understand its structure and characteristics.

[3]: # Display basic information about the dataset print("Number of rows and columns:", df.shape) print("\nData Types and Missing Values:") print(df.info()) print("\nFirst few rows of the dataset:") print(df.head())

Number of rows and columns: (522064, 7)

Data Types and Missing Values:

<class 'pandas.core.frame.DataFrame'> RangeIndex: 522064 entries, 0 to 522063

Data columns (total 7 columns):

#	Column	Non-Null Count	Dtype		
0	BillNo	522064 non-null	object		
1	Itemname	520609 non-null	object		
2	Quantity	522064 non-null	int64		
3	Date	522064 non-null	datetime64[ns]		
4	Price	522064 non-null	float64		
5	CustomerID	388023 non-null	float64		
6	Country	522064 non-null	object		
dtypes: datetime64[ns](1), float64(2), int64(1), object(3)					
a = a					

memory usage: 27.9+ MB

None

First few rows of the dataset:

	BillNo	Itemname	Quantity	Date
0	536365	WHITE HANGING HEART T-LIGHT HOLDER	6 2010-12-01	08:26:00
1	536365	WHITE METAL LANTERN	6 2010-12-01	08:26:00
2	536365	CREAM CUPID HEARTS COAT HANGER	8 2010-12-01	08:26:00
3	536365	KNITTED UNION FLAG HOT WATER BOTTLE	6 2010-12-01	08:26:00
4	536365	RED WOOLLY HOTTIE WHITE HEART.	6 2010-12-01	08.26.00

	Price	CustomerID		Country
0	2.55	17850.0	United	Kingdom
1	3.39	17850.0	United	Kingdom
2	2.75	17850.0	United	Kingdom
3	3.39	17850.0	United	Kingdom
4	3.39	17850.0	United	Kingdom

Preprocessing

We'll preprocess the data to ensure it's ready for analysis.

```
[4]: #Check Missing Values
     print("Missing Values:")
```

```
print(df.isnull().sum())
     #Drop Rows with Missing Values
     df.dropna(inplace=True)
    Missing Values:
    BillNo
                    1455
    Itemname
    Quantity
                       0
    Date
                        0
    Price
    CustomerID
                  134041
    Country
                       0
    dtype: int64
[5]: # Convert dataframe into transaction data
     transaction_data = df_groupby(["BillNo", "Date"])["Itemname"]_apply(lambda x:_
      . '.join(x)).reset_index()
     #Drop Unnecessary Columns
     columns_to_drop = ['BillNo', 'Date']
     transaction_data_drop(columns=columns_to_drop, inplace=True)
     # Save the transaction data to a CSV file
     transaction_data_path = "/kaggle/working/transaction_data.csv"
     transaction_data_to_csv(transaction_data_path, index=False)
[6]: # Display the first few rows of the transaction data
     print("\nTransaction Data for Association Rule Mining:")
     print(transaction_data.head())
     transaction_data.shape
    Transaction Data for Association Rule Mining:
                                                 Itemname
    0 WHITE HANGING HEART T-LIGHT HOLDER, WHITE META...
    1 HAND WARMER UNION JACK, HAND WARMER RED POLKA DOT
    2 ASSORTED COLOUR BIRD ORNAMENT, POPPY'S PLAYHOU...
    3 JAM MAKING SET WITH JARS, RED COAT RACK PARIS ...
                                BATH BUILDING BLOCK WORD
[6]: (18192, 1)
```

4.1 Formatting the transaction data in a suitable format for analysis

Developing the preprocessed data into analysis. Split the 'Itemname' column in transaction_data into individual items using str.split(', ', expand=True). Concatenate the original DataFrame (transaction_data) with the items DataFrame (items_df) using pd.concat. Drop the original 'Itemname' column since individual items are now in separate columns. Display the resulting DataFrame.

```
[7]: # Split the 'Itemname' column into individual items
items_df = transaction_data["Itemname"].str.split(", ", expand=True)

# Concatenate the original DataFrame with the new items DataFrame
transaction_data = pd.concat([transaction_data, items_df], axis=1)

# Drop the original 'Itemname' column
transaction_data = transaction_data.drop("Itemname", axis=1)

# Display the resulting DataFrame
print(transaction_data.head())
```

```

4 Association Rules - Data Mining

4.1 Converting Items to Boolean Columns

To prepare the data for association rule mining, we convert the items in the transaction_data DataFrame into boolean columns using one-hot encoding. This is achieved through the pd.get_dummies function, which creates a new DataFrame (df_encoded) with boolean columns representing the presence or absence of each item.

4.2 Association Rule Mining

We apply the Apriori algorithm to perform association rule mining on the encoded transaction data. The min_support parameter is set to 0.007 to filter out infrequent itemsets. The resulting frequent itemsets are then used to generate association rules based on a minimum confidence threshold of 0.5. Finally, we print the generated association rules.

```
[9]: # Load transaction data into a DataFrame
    df_encoded = pd_read_csv("transaction_data_encoded.csv")

from mlxtend_frequent_patterns import apriori, association_rules

# Association Rule Mining
frequent_itemsets = apriori(df_encoded, min_support=0.007, use_colnames=True)
```

```
rules = association_rules(frequent_itemsets, metric="confidence", min_threshold=0.5)

# Display information of the rules
print("Association Rules:")
print(rules.head())
```

Association Rules:

			antecedents			cons	equents \	
0		(CHOCOLATE	BOX RIBBONS)		(6 RIB	BONS RUSTIC	CHARM)	
1			GIRL DESIGN)	(PACI	K OF 72 RET	ROSPOT CAKE	CASES)

5 Visualization

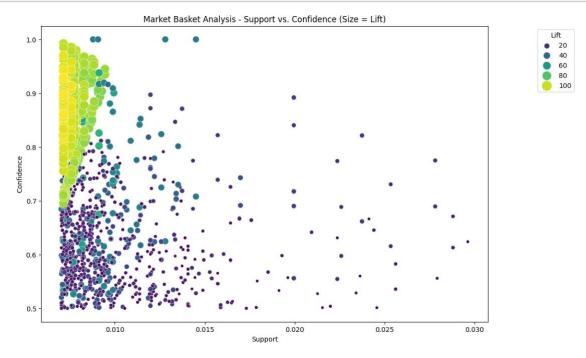

5.1 Visualizing Market Basket Analysis Results

We use matplotlib and seaborn libraries to create a scatterplot visualizing the results of the market basket analysis. The plot depicts the relationship between support, confidence, and lift for the generated association rules.

```
import matplotlib.pyplot as plt
import seaborn as sns

# Plot scatterplot for Support vs. Confidence
plt_figure(figsize=(12, 8))
sns.scatterplot(x="support", y="confidence", size="lift", data=rules,____hue="lift", palette="viridis", sizes=(20, 200))
plt_title("Market Basket Analysis - Support vs. Confidence (Size = Lift)")
plt_ylabel("Support")
plt_ylabel("Confidence")
```

```
plt_legend(title="Lift", loc="upper right", bbox_to_anchor=(1.2, 1))
plt.show()
```

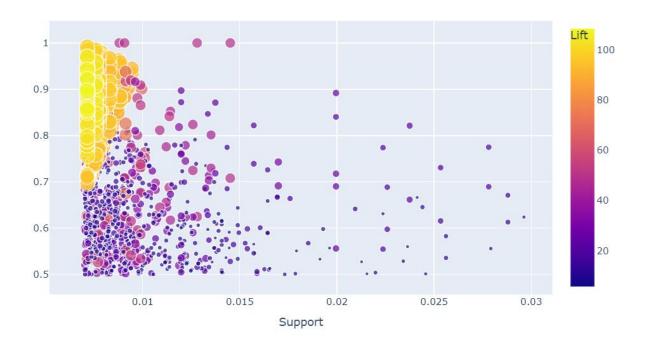

5.2 Interactive Market Basket Analysis Visualization

We leverage the Plotly Express library to create an interactive scatter plot visualizing the results of the market basket analysis. This plot provides an interactive exploration of the relationship between support, confidence, and lift for the generated association rules.

```
showlegend=True
)

# Show the interactive plot
fig.show()
```

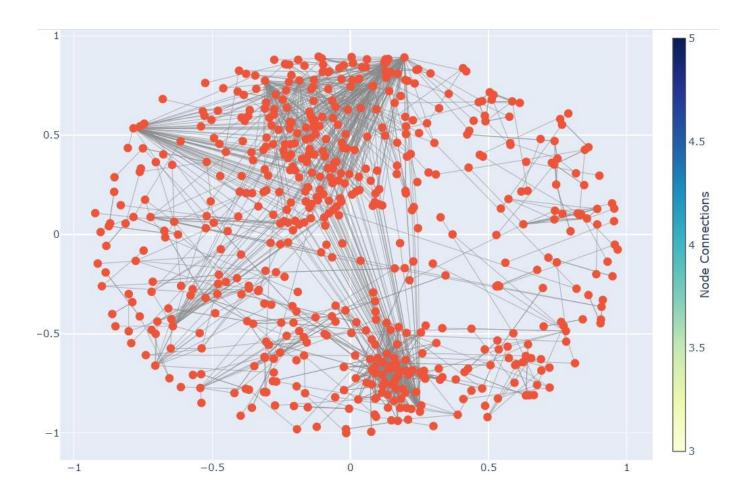

Market Basket Analysis - Support vs. Confidence

5.3 Interactive Network Visualization for Association Rules

We utilize the NetworkX and Plotly libraries to create an interactive network graph visualizing the association rules. This graph represents relationships between antecedent and consequent items, showcasing support as edge weights.

```
node_x = []
node_y = []
for node in G.nodes():
    x, y = pos[node]
    node_x.append(x)
    node_y.append(y)
node_trace = go.Scatter(
    x=node_x, y=node_y,
    mode="markers",
    hoverinfo="text",
    marker=dict(
        showscale=True,
        colorscale="YlGnBu",
        size=10,
        colorbar=dict(
            thickness=15,
            title="Node Connections",
            xanchor="left",
            titleside="right"
        )
    )
)
# Customize the layout
layout = go.Layout(
    showlegend=False,
    hovermode="closest",
    margin=dict(b=0, I=0, r=0, t=0),
)
# Create the figure
fig = go_Figure(data=[edge_trace, node_trace], layout=layout)
# Show the interactive graph
fig.show()
```

5.4 Interactive Sunburst Chart for Association Rules

We use Plotly Express to create an interactive sunburst chart visualizing association rules. This chart represents the relationships between antecedent and consequent items, showcasing lift as well as support through color intensity.

[13]: import plotly.express as px

Combine antecedents and consequents into a single column for each rule

Market Basket Analysis - Sunburst Chart
